

The scatter plot displays the relationship between the number of questionnaires returned (X-axis) and the mean clinical value (Y-axis). The X-axis ranges from 0 to 250, and the Y-axis ranges from 7.5 to 10. A red horizontal line at Y=9.0 represents the collective mean value. Two blue curved lines represent the 95% confidence interval (VI- and VI+). Open circles represent individual clinical mean values. One data point at approximately (35, 9.2) is highlighted with a red border.
