

Figure 1: Scatter plot showing the relationship between the number of questionnaires returned (X-axis) and the adjusted mean value (Y-axis). The plot includes a red dashed vertical line at X=20, a horizontal red line at Y=8.85, and blue curves representing the 95% confidence interval (IC- 95% and IC+ 95%). Data points are colored circles: red for the main dataset, green for a subset, and white for hospital mean values (Valeur moyenne (VM) hôpital). A large white circle with a black border highlights a specific data point at approximately (15, 9.1).
