

The scatter plot displays the relationship between the number of included interventions (x-axis) and the adjusted infection rate (y-axis). The x-axis ranges from 0 to 130, and the y-axis ranges from 0 to 25. A blue curve represents the 99.8% limit, which decreases as the number of interventions increases. A red horizontal line indicates the average rate at approximately 4.5%. Data points are represented by open circles, showing a general downward trend. A legend at the bottom identifies the blue line as '99.8%-Limite', the red line as 'Durchschnittliche Rate', and the open circles as 'Adjustierte Rate / Spital'.
