

The scatter plot displays the relationship between the number of questionnaires received (X-axis) and the adjusted mean score (Y-axis). The X-axis ranges from 0 to 300, and the Y-axis ranges from 7.75 to 9.75. A horizontal red line at approximately 8.7 represents the overall mean score. Two blue curves represent the 95% confidence interval (KI-95% and KI+95%). Data points are colored red or green, and a specific point at approximately (65, 8.65) is highlighted with a red circle and a grey border, representing the hospital's mean score.
