

The scatter plot displays the relationship between the number of questionnaires received (X-axis) and the non-adjusted mean (Y-axis). The X-axis ranges from 0 to 300, and the Y-axis ranges from 8.0 to 9.8. A red horizontal line represents the overall mean at approximately 8.84. Two blue curves represent the 95% confidence interval (KI- 95% and KI+ 95%). A large white circle with a red border indicates the hospital's mean (Mittelwert (MW) Spital) at approximately (110, 9.12). Data points are colored red and green, representing different groups or categories.
