

The scatter plot displays the relationship between the number of questionnaires received (X-axis) and the non-adjusted mean score (Y-axis). The X-axis ranges from 0 to 300, and the Y-axis ranges from 8.0 to 9.8. A horizontal red line represents the overall mean score of the entire population. Two blue curves represent the 95% confidence interval. A red circle with a white center highlights the hospital's mean score, which is significantly higher than the overall mean.
