

The scatter plot displays the relationship between the Adjusted Rehospitalization Rate (%) on the y-axis and the Number of Considered Discharges on the x-axis. A red horizontal line at approximately 12.2% indicates the average rate across all hospitals/clinics. Data points are categorized as follows:

- Ergebnis im Normbereich (Dark Grey):** Most data points fall within this range, showing a general downward trend as the number of discharges increases.
- Ergebnis tiefer als Vergleichswert (Light Green):** These points are located below the average line, indicating better performance than the average.
- Ergebnis höher als Vergleichswert (Orange):** These points are located above the average line, indicating worse performance than the average.

A specific data point at approximately (700, 12.0) is highlighted with a red circle, representing a hospital/clinic with a rate slightly below the average for its volume of discharges.
