

The scatter plot displays the relationship between the adjusted rehospitalization rate and the number of discharges considered. The y-axis, 'Adjustierte Rehospitalisationsrate %', ranges from 4 to 18. The x-axis, 'Berücksichtigte Austritte', ranges from 0 to over 2,000. A red horizontal line at 9.0% represents the average rate. Data points are categorized as follows:

- Ergebnis im Normbereich (Grey):** Most data points fall within this range, clustered between 0 and 1,000 discharges and 6% to 12% rate.
- Ergebnis höher als Vergleichswert (Orange):** Several points are above the 9.0% line, with one notable outlier at approximately (100, 16.5%).
- Ergebnis tiefer als Vergleichswert (Green):** A few points are below the 9.0% line, including one at approximately (150, 4.8%).

A specific data point at approximately (650, 8.5%) is highlighted with a red border, indicating a rate slightly below the average for a moderate number of discharges.
